

6Perspex SB

With great pleasure **Pro-Ject Audio Systems** announces the release of a an advanced version of the former EISA winner 6Perspex. The **6Perspex SB** offers outstanding performance and luxurious look & feel with stunning features in this price segment. While audio electronics are often hidden and controlled by smartphone or tablet apps, the analogue record player again is put in scene as the center of a real hifi system and proudly presented like high-quality speakers.

6Perspex SB is the ultimate sub-chassis turntable of the 21st century

Due to extensive research and development we took our ground-breaking and pioneering design with **true class-leading sound** and formed the new beautiful and clever designed **6Perspex SB**.

The transparent acrylic plinth stands on three individually height-adjustable **TPE-damped aluminium cones** and carries the motor and the sub-chassis. The sub-chassis, made of **Corian**, rests on **three magnetic fields**. A magnetic subchassis suspension system avoids parasitic noise normally caused by conventional spring mechanisms. A supplied spirit level allows easy adjustment of the sub-chassis.

The **resonance-optimised platter** is a sandwich construction utilising a fine-balanced medium density fibre platter and a **4mm thick flat-ground layer of vinyl** and a screw-down metal record clamp. It runs on an inverted bearing with stainless-steel axle carrying a **ceramic ball/plate bearing**.

Compared with conventional metal platters, it offers **uncompromised sound** quality. It gives **ultimate contact to vinyl records** and **no additional turntable mat is needed!**

A quiet running AC motor unit drives the platter's outside edge via a belt. It does also integrate an **electronic DC/AC power generator** for clean up the AC generated noise and ensures **perfect speed stability** with **electronic speed change**.

TPE damped spike feet perfectly isolate the turntable from the surface, an **outboard motor** prevents vibration to affect the turntable.

We believe **6Perspex SB** is an ingenious step into the audiophile world including advanced 9" tonearm, that lifts the resulting sound to a **next level in this analogue turntable price segment**.

The highly acclaimed **9" tonearm** uses a tube made from carbon fibre, that offers **ultimate rigidity with highest internal damping**. A conical armtube avoids standing wave reflections. Inverted tonearm bearing comprises four hardened stainless tips in ABEC 7 spec ballraces. This makes the tonearm suitable for almost any **high-quality MM and MC cartridges**. Additional features include a **TPE-damped counterweight**. Supplied counterweights are suitable for cartridges weighing between 5 - 7,5g / 7 - 10g / 9 - 11g or 10 - 14g. All ingredients add up to a miracle in sound for the price and ultra-stylish look!

A top-grade connection cable 'Pro-Ject Connect it E' with RCA connectors is supplied (123cm) as well as a dust cover.

ABOUT PRO-JECT AUDIO SYSTEMS

Pro-Ject Audio Systems was founded by Heinz Lichtenegger 1990 in Vienna, with the idea that analogue playback is the most cost-effective way to listen to music of audiophile quality.

Inspired by the concept of supporting analogue in the face of the digital onslaught, Pro-Ject Audio Systems became one of the most powerful driving forces in reinventing analogue turntables for the hi-fi market. Today, Pro-Ject Audio Systems is the world leader in the manufacture of quality hi-fi turntables, as turntables are once again accepted as a must-have for every concerned music lover. Pro-Ject products are exported to almost 80 countries worldwide and is the recipient of nearly every award in the audio industry. Pro-Ject produces more than 15 different models to satisfy any taste, wish or requirement of the customer.

BY PRO-JECT AUDIO SYSTEMS

Since 2006, PRO-JECT Audio has been bringing its idea “less is more” mission to the digital world. Inspired by the new possibilities of the iPod and high-quality music reproduction from a PC or laptop, Pro-Ject Audio Systems has designed a complete new and revolutionary range of MICRO HIGH-END Hi-fi components under the family name BOX DESIGN. Starting with the smallest audiophile amp in the world, with open and euphonic sound, Pro-Ject Audio now produces all of the components of traditional hi-fi systems including CD players, tuners, phono amps, headphone amps and switching modules, as well as digital products such as docking stations, D/A converters and streamers to connect with the PC wired or wireless.

All of the components are packaged in Micro ‘cigarette pack’-sized boxes, which allows the stacking and mixing of the components according to the needs of the consumer. BOX DESIGN regards itself as the ‘next generation of hi-fi’ – the link between the micro-sized hardware of the IT world and the big boxes of the audiophile world. All products, except for speakers and headphones, are designed and produced in Europe.

PRO-JECT: Simple-to-use, high quality sound, astonishing value, long-term stability and good service.
